To find the length of:—

The Circumference of a Circle: multiply the diameter by 3·1416†; or approximately, $3\frac{1}{2}$ (only $\frac{1}{1000}$ above true value). Circumference multiplied by ·3183=diam.

The Diagonal of a Square: multiply the length of the side by 1·414.

The Diameter of a Circle equal to a Square: multiply side of square by 1·1284. *Vice versa*;—multiply the diameter of the circle by ·8862.

To find the area of:—

A Circle: square the diameter, then multiply by 0·7854. (See Table below).

A Square, or Rectangle: multiply together the lengths of two adjacent sides.

A Triangle: multiply the length of the base by half the perpendicular height.

To find the surface-area of:—

[height, then add area of base.

A Cone, or Pyramid: multiply the circumference of the base by half the slant

A Cylinder: multiply the circumference by the length, then add twice the area of

A Sphere: multiply the square of the diameter by 3·1416. [the end.

A Rectangular Box: add together—the length multiplied by twice the breadth, the length multiplied by twice the depth, and the breadth multiplied by twice [the depth.

To find the cubic contents of:—

A Cone, or Pyramid: multiply the area of the base by $\frac{1}{3}$ the perpendicular height.

A Cylinder: multiply the area of the end by the length.

A Sphere: cube the diameter, then multiply by 0·5236.

A Rectangular Box: multiply together the length, the breadth, and the height.

A Cask: add the square of the head diameter, to twice the square of the bung diameter; multiply by the length (all in inches, inside measurement), finally—

* These Tables read continuously in lines across the page, not down, and rise by tenths and quarters. Thus, 4·0 is in line with 4, at the side, in column headed 0; 4·1, 4·2, 4·3, &c., are in same line, but in columns headed 1, 2, 3, respectively, and so on. By shifting the decimal point to the right—one place for circumferences, two places for areas—the tables will give the values for all whole numbers up to 129. Thus, circumference of a circle 109 inches in diam., is 342·4 in., i.e. the figures for 10·9, with point shifted a place to right.

† See Table below.

SQUARES, CUBES, Sq. & CUBE ROOTS.

Squares of Decimal Nos. are also obtained from the Table, if, IGNORING THE POINT, the number is given. Take the square of that number, and place a point two places from the right for each place in the number; thus the square of 7·3 is that of 73, but with a point two places from the right=53·29, and of 73, 5329. The squares of multiples by 10, such as 730, are obtained by taking the square of 73 and adding two 0s, =532,900.

Cubes of Decimal Nos. are similarly found, placing the point THREE places from the right for each place in the number; or, for multiples by 10, adding THREE 0s.

Sizes of Type (Point System). A Point is 0.018445 inch; 12 points, 0.16602 inch—very nearly 1/2nd and 1/6th of an inch respectively. The names and sizes of the old 'bodies' (approx., the standards of each foundry differed slightly) are given at the side.

Ratio of Various Sizes of Type to one another. For finding the number of pages (approx.) a close-set book will make, *same size of page*, in other sizes of type, close set; the number of *lines* in the page will, of course, be greater or less.

In line with the type in which the book is set, take the figures in the column headed with the required type, then multiply the number of pages in the book by these figures, which gives the answer. Thus 256 pp. in 12 pt. type makes in 8 pt., 256 pp. x .444 = 114 pp.

SQUARE INCHES CONVERTED INTO SQ. FEET.

The two following tables will save much labour for goods measured in inches but charged at prices per square or cubic foot, such as packing cases, or freights. They read continuously *across* the columns, not down; the former rising by $\frac{1}{4}$ square foot, the latter by $\frac{1}{16}$ ths of a cubic foot, or 'inches.' The equivalent of any intermediate number, not given in the table, is the same as that of the preceding number in the table.

Ex.: The No. of sq. feet in 7,002 sq. inches, is $48\frac{1}{2}$, *i.e.*, the figures in line with 48 in the column headed ' $\frac{1}{4}$ ft.' 7,023 sq. inches is also $48\frac{1}{2}$ sq. feet, being less than 7,038, the lowest No. equivalent to 49 sq. feet. Similarly for the Cubic Table.

Note.—To find the *exact* number of square inches corresponding to any number of square feet, add to the number in the table, 18. Similarly for the Cubic Table, add 72.

Standard Gold is 22 carat (p. 16). 'Standard Silver,' the basis of the $\frac{7}{8}$ Troy ounce price quoted in the newspapers, is 37/40ths (=92½%) pure, or, technically, 'fine.' Purity is also reckoned in 1000ths; '925 fine,' or 'fineness,' means '925 of 'pure,' which is 1000.

INTEREST TABLES.

Tables I. to V., on pages 82 and 88, are calculated on the basis of Compound Interest, and show the amounts for £1; for any other sum, first convert the shillings and pence into decimals of £1 by the Table on p. 17, then multiply it by the figures for £1.

I. The Accumulated Amount of £1, with Compound Interest, at end of 1 to 21 years.

II. The Accumulated Amount of £1 per Annum, with Compound Interest. This Table shows the accumulated amount of a sum laid aside annually for depreciation, &c.

III. The Amount to pay off £1, in equal Instalments of Principal and Interest; (a) paid half-yearly; (b) paid once a year only. Also, the half-yearly or yearly Annuity for 1 to 21 years that £1 will purchase. To find Principal and Interest in each payment, see p. 88.

IV. The Present Value of £1, due at the end of 1 to 42 half-years, or 1 to 21 years.

V. The Present Value of £1 per Annum, due at the end of 1 to 17 years. This Table shows the present worth of a £1 lease, annuity, &c., having 1 to 17 years to run.

I. £1 with Compound Interest.

INTEREST TABLES.—Continued.

Table III.—To find Principal and Interest in each Payment.—Multiply the amount of the instalment by the Present Value of £1 (Table IV. *a* or *b*) for the number of half-years or years corresponding to the number of payments (inclusive) yet to be made. This gives the amount of Principal repaid in the instalment. The balance is the Interest.

Ex.—Find the sum required to repay in 10 years a loan of £150, by (*a*) annual, or (*b*) half-yearly payments of Principal and Interest at $3\frac{1}{4}\%$.

(*a*) By Table III*b*, $\text{£}150 \times \cdot 12024 = \text{£}18\cdot 0360 = \text{£}18. 0s. 8\frac{3}{4}d.$ paid yearly for 10 years.

(*b*) „ III*a*, $\text{£}150 \times \cdot 05969 = \text{£}8\cdot 9535 = \text{£}8. 19s. 0\frac{1}{2}d.$ „ half-yearly „

Find the Principal and Interest in the 6th instalment, in each case:—

(*a*) Total payments being 10, 5 have been already paid, therefore 5 remain to be paid, hence Principal repaid in the 6th payment is $\text{£}18\cdot 0360$ multiplied by $\cdot 84197$, the Present Value of £1 due 5 years hence, = $\text{£}15\cdot 1857$, or $\text{£}15. 3s. 8\frac{1}{2}d.$ The Interest is therefore $\text{£}2. 17s. 0\frac{1}{2}d.$

(*b*) Total payments being 20 (*i.e.*, twice a year for 10 years), and 5 already paid, 15 half-yearly payments have yet to be made, hence Principal repaid is $\text{£}8\cdot 9535$ multiplied by $\cdot 77087$, the Present Value of £1 due 15 half-years hence, = $\text{£}6\cdot 902$, or $\text{£}6. 18s. 0\frac{1}{2}d.$; and Interest is therefore $\text{£}2. 1s. 0\frac{1}{2}d.$

Bank Discount; actual rate per cent. paid.—Banks deduct the discount at once from the sum advanced. The following Table shows, to nearest ⅛%, the real rate paid for the money, calculated on same basis as interest payable at the end of the period.

Two Discounts deducted in succession.—The total discount thus obtained is not the same as the sum of the two discounts, but is less, and the following Table shows, to the nearest ⅛%, the total discount actually allowed. *Ex.*: An allowance of 40%, and then of 5% is not 45%, but (see left-hand column 40%, and top line 5%), 43% only.
